DOP LayerHelper V1

Installation

The DOP LayerHelper V1.0 comes as two Javascript files for Photoshop CS3 (we only support CS3 right now but chances are it works also on CS2).

- DOP_LayerHelper_Read_V1.jsx (demo version is named: DOP_LayerHelper_Read_V1_Demo.jsx)
- DOP_LayerHelper_Write_V1.jsx (demo version is named: DOP_LayerHelper_Write_V1_Demo.jsx)

Installing the script

The script needs to be copied to the Photoshop CS3 folder and here to Presets/Scripts. After restarting CS3 you should find the script under File->Scripts. If you do not find it there you did not put the script into the proper location.

Note: The free demo version can only handle images up to 2000 pixels wide. The commercial version does not have this restriction.

How to use

There is only an online description available at:
